A. M. E. C. E. A<br>P.O. Box 62157<br>00200 Nairobi - KENYA<br>Telephone: 891601-6<br>SEPTEMBER - DECEMBER 2019 TRIMESTER<br>FACULTY OF SCIENCE<br>DEPARTMENT OF CHEMISTRY<br>REGULAR PROGRAMME<br>CHEM 201: PHYSICAL CHEMISTRY II

## Date: DECEMBER 2019 <br> Duration: 2 Hours <br> INSTRUCTIONS: Answer Question ONE and any other Two Questions

Q1. a) Substances $A$ and $B$ are known to form a simple binary mixture. The tie line $X-Y$ intercepts the liquidus when the $X_{B}=0.85$ and the solidus
when $X_{B}=0.21$.
i. Sketch the diagram for the A-B alloy mixture explaining its different sections.
ii. Calculate the solid: liquid ratios on a point on the tie line when $X_{B}=0.55$.
marks)
b) The van der Waals constants for Benzene are: $a=18.24 l^{2}-$ mol $^{-2} ; b=0.1154 \mathrm{l} . \mathrm{mol}^{-1}$. Using the van der Waals equation of state, calculate the pressure of $\quad 0.56$ moles of Benzene with a volume of 5.67 litres at a temperature of

235K ( $\mathrm{R}=0.082057$ litres. atm/ K.mol.) (4 marks)
c) $\quad 0.44$ moles of a gas experiences a $\Delta \mathrm{T}$ of 78 K . If it's corresponding $\Delta \mathrm{U}$ is 28.5 J :
i. Calculate it's heat capacity at constant pressure ( $\mathrm{C}_{\mathrm{P}}$ ) assuming that $R=8.314 \mathrm{~J} / \mathrm{mol} . \mathrm{K}$ ) (5 marks)
ii. Calculate the $\Delta \mathrm{H}$ for the reaction
d) The gas undergoes an isothermal expansion at 250 K from 10.19 litres to 19.12 litres. It then undergoes an adiabatic expansion to 21.78
litres as the temperature falls to 201 K . Calculate the work done in
these two steps.
(5 marks)
e) If:
$\mathrm{CH}_{2} \mathrm{O}_{(g)}+\mathrm{H}_{2} \mathrm{O}_{(g)} \rightarrow \mathrm{CH}_{4|g|}+\mathrm{O}_{2|g|} \Delta \mathrm{H}=+275.6 \mathrm{~kJ} \ldots 1$
$\mathrm{CH}_{2} \mathrm{O}_{(g)}+\mathrm{O}_{2(g)} \rightarrow \mathrm{CO}_{2(g)}+\mathrm{H}_{2} \mathrm{O}_{(g)} \Delta \mathrm{H}=-526.7 \mathrm{~kJ} \ldots 2$
$\mathrm{H}_{2} \mathrm{O}_{(l)} \rightarrow \mathrm{H}_{2} \mathrm{O}_{(g)} \Delta \mathrm{H}=44.0 \mathrm{~kJ} \ldots 3$
Calculate the $\Delta H$ for:
$\mathrm{CH}_{4(g)}+2 \mathrm{O}_{2(g)} \rightarrow \mathrm{CO}_{2(g)}+2 \mathrm{H}_{2} \mathrm{O}_{(l)}$
(5 marks)

Q2. a) Platinum and silver form a peritectic alloy. The melting point of Ag is $920^{\circ} \mathrm{C}$ while that of Pt is $1750^{\circ} \mathrm{C}$. The peritectic temperature is $1200^{\circ} \mathrm{C}$. Sketch the peritectic phase diagram of these two metals indicating its components.
(5 marks)
b) Two similar metals of the same size and cross-sectional area are contacted with each other. Temperature of the hotter metal is 1070
K and to heat that of the colder metal is 120 K . Calculate the entropy change due marks) transfer after contact. ( $\left.\mathrm{C}_{v}=0.871 \mathrm{~J} / \mathrm{g} . \mathrm{K}\right)$
c) Using the Kirchhoff's law, calculate the molar enthalpy change for liquid water when it experiences a temperature increase from 27 K to
539K. (a = $\left.75.29 \mathrm{~J} / \mathrm{mol} . \mathrm{K} ; \mathrm{b}=0 \mathrm{~J} / \mathrm{mol} . \mathrm{K}^{2} ; ~ c=0 \mathrm{~J} . \mathrm{K} / \mathrm{mol}.\right)$
(4 marks)
d) Substances $A$ and $B$ react in the following way:
$A+B \longrightarrow C+D$
The table below depicts the concentrations of the reactants and products at different temperatures:

| Temp. (K) | 207 | 273 | 387 | 498 | 567 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Conc. of A <br> (mg/l) | 7.02 | 5.87 | 4.23 | 3.66 | 1.56 |
| Conc. of B <br> (mg/l) | 7.45 | 6.75 | 5.93 | 5.03 | 3.32 |
| Conc. of C <br> (mg/l) | 5.26 | 7.12 | 8.02 | 8.30 | 9.11 |
| Conc. of D <br> (mg/l) | 5.33 | 7.63 | 8.65 | 9.04 | 9.82 |

ISO 9001: 2015 Certified by the Kenya Bureau of Standards

Using the Van't Hoff equation graphically determine if the reaction is exothermic or endothermic in nature ( $\mathrm{R}=8.314 \mathrm{~J} / \mathrm{K}$. mol.) (Use graph paper provided)
(6 marks)

Q3. a) Using a relevant expression: Define the term 'internal pressure'. Give reasons why it differs between ideal and non-ideal gases?
marks)
b) Substance $X$ and $Y$ form a peritectic alloy. The melting point of $X$ is $1038^{\circ} \mathrm{C}$ while that of Y is $3070^{\circ} \mathrm{C}$. The peritectic temperature is $2545^{\circ} \mathrm{C}$. Sketch the peritectic phase diagram labelling all the relevant parts.
c) The standard enthalpy of combustion of propane is exothermic. Using a relevant expression, explain
marks)
d) Using a well- labelled diagram, describe the different steps in the Carnot cycle
marks)

Q4. a)
i. Using a well- labelled diagram, describe the one component system (5 marks)
ii. Using the phase rule, calculate the degrees of freedom for a point in:

- The liquid phase
- The liquid- solid interface
- The triple point
(3 marks)
b) Explain the differences in the degrees of freedom between the three points

## marks)

c) Gas $\left.A T_{A}=146 \mathrm{~K}\right)$ and gas $B\left(U_{B}=35 \mathrm{~J}\right.$ and $\left.T_{B}=726 \mathrm{~K}\right) \quad$ contained in two compartments separated from their surroundings. Calculate the entropy change $(\Delta S)$ if the partition between the two compartments is removed and the two gases are allowed to mix
d) Using a relevant expression, explain how efficiency of the carnot cycle could be calculated marks)

Q5. a) Gas $A$ and Gas B are formed out of the same molecules. Using the Maxwell distribution of gases, explain why Gas A molecules at temperature $T_{A}$ have a higher kinetic energy than Gas $B$ (Assume that $T_{A}>T_{B}$ )
(Temp. $\mathrm{T}_{\mathrm{B}}$ )
(6 marks)
b) Explain the applications of thermodynamics in:
i. Protein Folding
ii. Mineral Exploration
(4 marks)
c) Calculate the mass of a 28.98 L sample of ammonia gas measured at standard conditions.
Hint: Use K units for temperature and atm. units for Pressure. ( $\mathrm{R}=0.0821 \mathrm{~L}$. atm. $/ \mathrm{mol}$. K, mass number for $\mathrm{N}=14 ; \mathrm{H}=1$ ). ( 6 marks)
e) Using a relevant diagram, describe the differences between the following thermodynamic processes:
i. Adiabatic Process
ii. Isochoric Process
iii. Isothermal Process
iv. Isobaric Process
*END*
