# SEPTEMBER – DECEMBER 2019 TRIMESTER

MAIN EXAMINATION

## FACULTY OF SCIENCES

## DEPARTMENT OF COMMUNITY HEALTH

## **REGULAR PROGRAMME**

## HBMS 103: BIOSTATISTICS

Date: DECEMBER 2019Duration: 2:30 HoursINSTRUCTIONS: Answer ALL Questions in SECTION A and any TWO in<br/>SECTION B

## SECTION A [40 MARKS] All questions are compulsory.

Q1. a) Explain the four characteristics of scales of measurement in statistics (4 Marks)

- b) Explain the relationship between the following terms in statistics
  - i) Sample and population
  - ii) Continuous and quantitative variable
- c)
- i) Applicants for a job were rated by two members of the interviewing panel, with the following results.

Applicant	А	В	С	D	E
Member 1	4	1	3	2	5
Member 2	3	2	5	1	4

Find the spearman correlation coefficient for the above data(6 Marks)Given a set of paired data (X,Y)

a) If Y is independent of X, then what value of a correlation coefficient would you expect?

(2 Marks)

(2 Marks)

(2 Marks)

b) If Y is linearly dependent on X, then what value of a correlation coefficient would you expect?

#### (2 Marks)

c) Components in a personal stereo are normally distributed with a mean life of 2400 hours with a standard deviation of 300 hours. It is estimated that the average user listens for about 1000 hours in one year. What is the probability that a component lasts for more than three years? (3 Marks)

- d) IQs are designed to be normally distributed with a mean of 100 and a variance of 225. To join High School an IQ of 138 is required. What percentage of the population are eligible to join? (3 Marks)
- e) A psychologist claims that any child with an IQ of 150 and above is "gifted". How many "gifted" children would you expect to find in a school of 1800 pupils? (3 Marks)
- f) Find the mean, mode median and standard deviation of the following data: 12, 10,15, 10, 16, 12,10,15, 15, 13

(9 Marks) g) Compute the Semi interquartile range for the data in question e above (4 Marks)

## SECTION B - CHOOSE TWO QUESTIONS - (40 Marks)

- Q2. Use the data of X and Y to determine the following? X 13 20 22 18 19 11 10 15 Y 17 19 23 16 20 10 11 18
  - a) Calculate the product moment correlation coefficient
    - (9 Marks) (2 Marks)

- b) Interpret the correlation coefficient
- c) Draw a scatter plot of blood pressure against age (3 Marks)
- d) Find the equation of the regression line of x on y (4 Marks)
- e) Use your regression line equation to estimate the value of Y when X is 30

(2 Marks)

Q3. One of the questions in the 2004 General Social Survey attempted to determine whether exposure to television weakens or strengthens confidence in the (presumably) television press. At 0.05 level of significance, do the hours of exposure to TV have effect on confidence in the TV press? (10 Marks)

	Hours of exposure						
	0-1	2-4	5 or more				
A good deal of confidence	276	41	17				
Only some confidence	196	174	47				
Hardly any confidence	130	97	15				

- Q4. The newspaper division has compiled data on the age of accounts receivables. The data collected indicate that the age of the accounts follows a normal distribution with mean 20 days and standard deviation 4 days.
  - i. What proportion of the accounts is between 16 and 30 days old?

(2 Marks)

- ii. What proportion of the accounts are less than 20 days old?
  - (2 Marks)

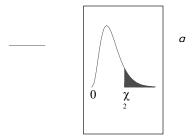

iii. Explain any four characteristics of standard normal distribution

iv. What is the difference between type 1 and type II error in hypothesis testing? (2 Marks)

$$\overline{x} = \frac{\sum x}{n}, \quad \mu = \frac{\sum x}{N}, \quad s = \sqrt{\frac{\sum (x - \overline{x})^2}{n - 1}}, \quad \overline{x} = \frac{\sum xf}{n}, \quad s = \sqrt{\frac{\sum (x - \overline{x})^2 f}{n - 1}}, \quad CV = \frac{s}{\overline{x}}, \quad z = \frac{x - \mu}{\sigma}, \quad z = \frac{\overline{x} - \mu}{\sigma / \sqrt{n}}, \quad n \ge 30, \quad \overline{x} = z_c \frac{\sigma}{\sqrt{n}} < \mu < \overline{x} + z_c \frac{\sigma}{\sqrt{n}}, \quad SS_x = \sum x^2 - \frac{\left(\sum x\right)^2}{n}, \quad SS_y = \sum y^2 - \frac{\left(\sum y\right)^2}{n}, \quad SS_{xy} = \sum xy - \frac{\left(\sum x\right)\left(\sum y\right)}{n}, \quad z \ge xy - \frac{\left(\sum x\right)\left(\sum x\right)\left(\sum y\right)}{n}, \quad z \ge xy - \frac{\left(\sum x\right)\left(\sum x$$
